

# POCKET TYPE NOBBING MACHINE

## Application

Pocket nobbing machine is widely used for processing fresh or defrosted fish.

The main applications is for cutting of sardines, sprats, herring, mackerel and other species of pelagic fish.

With this machine fish can be cut in several ways e.g. removal of head and gutting, removal of head and tail and gutting, or removal of head and tail, gutting and cutting into pieces and multiple form filleting.

## Main benefits

- Clean cuts without damaging the fish
- Laser fish measurement system
- High yield
- Easy maintenance and cleaning
- Food grade materials

## Operating principle

The product can be inserted into pockets with either manual operator infeed or automatic feeding unit. To maintain optimal productivity, all pockets must be filled before entering the cutting section.

Laser measurement system adjust cutting place in order to achieve highest possible yield.

Upon the modification of machine multiple products can be produced. In order to find out best suitable product for you, please contact our sales team.
