

# AUTOPACKER FOR VERTICAL CANS

## Application

The autopacker for vertical cans is designed as a multi-purpose packing machine for food products.

The autopacker is suitable for processing different types of fresh, quality frozen, and defrosted pelagic fishes: sardines, mackerel, herring, etc. The autopacker machine handles fish processing from A to Z – it automatically receives, de-heads, guts, and puts fish into vertical cans. The machine can also be used for canning various long products, not only fish but also asparagus, cucumbers, sausages, etc. On average, the autopacker produces up to 120 cans per minute and works with Jitney, Tall, and Buff can types.

## Main benefits

- Clean cuts without damaging the fish
- Low water consumption
- High yield
- Pre set fish count into cans
- Just 4 operators
- Easy maintenance and cleaning

## Operating principle

Fish is received in hopper elevator, from which fish is automatically infedded into gutting unit.

Gutting unit removes head tail and guts from the fish.

If fish used into canning is larger than 15 cm, then nobbing machine can be equipped with 3 cut device that cuts fish to the appropriate size.

When fish is gutted and lengthened it is infedded automatically into cans with speed up to 50 cans minute.

## Processing capacity

### AUTOPACKING LINE (cans/minute)

Full line capacity

120

## See equipment in action

\*Equipment is adaptable to various size and weight dimensions

## Technical characteristics

<b>Productivity</b>	120 cans per minute with only 4 operators
<b>Types of cans used</b>	Jitney cans, Tall can, Buff can
<b>Fish processed</b>	Sardine, mackerel or similar
<b>Condition of fish to achieve max capacity</b>	Fresh or quality frozen and defrosted. Bad quality fish will reduce capacity and increase error percentage
<b>Length of fish</b>	110 – 240 mm
<b>Operators</b>	2x1 for nobbing operation 2x1 for can packing quality control
<b>Dimensions</b>	8800 x 5600 mm
