

# JAR WASHING MACHINE

## Application

Glass jars washing equipment is intended for glass jars rinsing to remove solid particles. The equipment may be operated indoors at the temperatures ranging from 5°C to 40°C.

This machine is adjustable and allows to wash different jar sizes.

## Main benefits

- Adjustable linear speed
- Only 1 operator
- Continuous movement
- Adjustable for different sizes of jars

## Operating principle

The equipment is controlled from the main control box. Firstly, the system must be connected to the electrical network. This is done by turning the special network switch. When the system is connected to the network, the entire line can be operated.

When the diameter of the jar changes, it is necessary to set the machine to the appropriate diameter of the jar, this can be achieved by bringing the rotary conveyors closer or further away and adjusting the guides to the appropriate diameter of the jar.

## Processing capacity

	<b>BOX WASHING MACHINE</b> (units/h)
Jars	Up to 8000

\*Equipment is adaptable to various size and weight dimensions
