

TOP LOADER

Application

Top Loader is top load case packer which packs products into box vertically. It is designed for packaging products in case for high-speed production lines.

Equipment will be designed by requested product specification.

From making the box to sealing it securely.

Main benefits

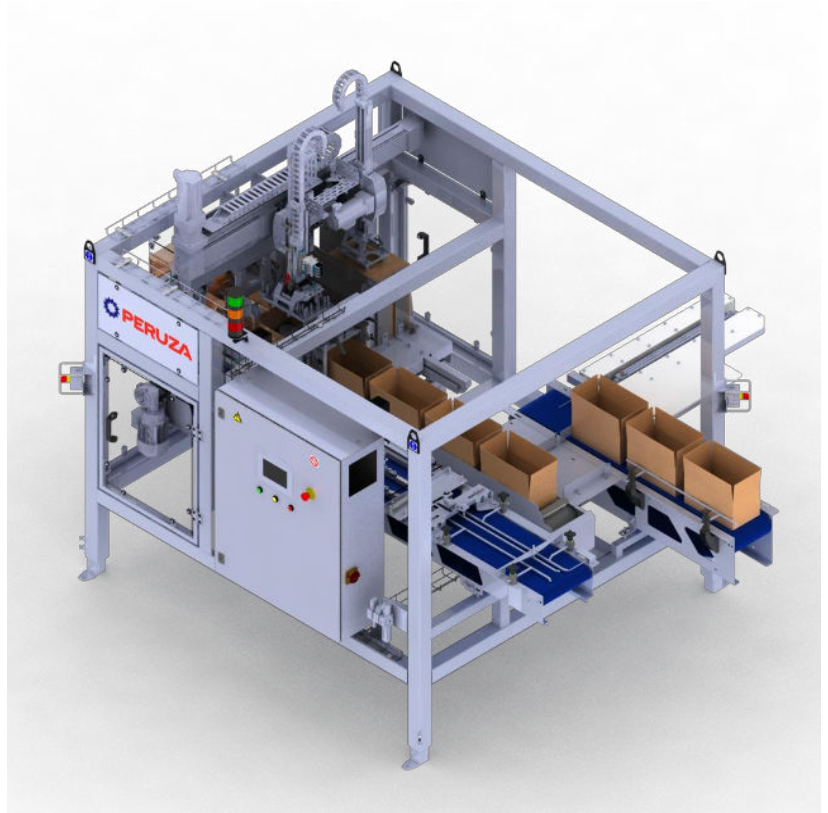

- Precise product positioning
- Ideal for fragile products
- Adaptable to customer needs
- Wide range case sizes
- Can add slip sheets between layers

Operating principle

Firstly the packaging box is prepared by crafting the box to be ready for products.

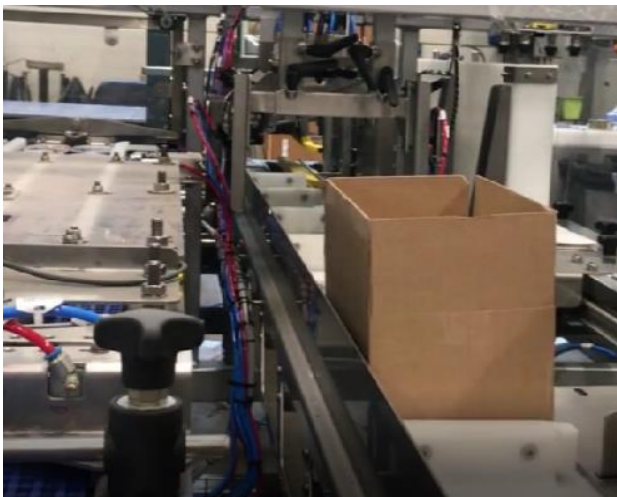

Product is packed from one or more infeed lines, which is formed to desired layout. Formed layout is picked up and inserted into case.

The loaded box proceeds to get folded and tapped to seal the box and ensure it doesn't open.

Technical characteristics

Product material	Metal, plastic, glass and other
Processing capacity	Depends on client needs
Cycle time	Up to 2.5 seconds (depending on the product)
Machine dimension	3400 x 2850 x 2200 mm
Key features	Fast, reliable, adaptable for customer product

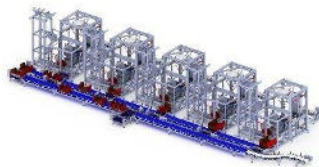

For more processing solutions

Full layer palletizer

Efficient and adaptable products palletizer.

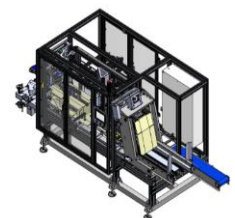

Robot packer

Save your workforce and space expenses.

Continuous vertical lift

Fast and robust solution to get products to different heights.

Side Loader

Fast case packer for placing products from the side.
